

Clinical Trials and beyond

Embedded in the Eurofins BioPharma Services division, Eurofins Central Laboratory has over 20 years of experience in global Kit Packing and Distribution Services. Building on a proven track record of building and distributing study and visit-specific specimen collection and transportation kits in support of Clinical Trials, we also provide specimen collection kits for Commercial DNA Testing, Clinical Diagnostics direct to physician offices, Clinical Monitoring Programs and Post Marketing Surveillance.

Eurofins is a turnkey provider which deploys lean, globally standardized processes, enabling high quality GMP and FDA compliant specimen and transportation kits to be distributed worldwide. Following an extensive QC program during the Kit Assembly process, over 99% of our kits are shipped out being 100% correct.

Eurofins Central Laboratory has a full global logistics system in place to transport samples back to the Central Laboratory Testing Facilities, or any other destination, either inside or outside the Eurofins BioPharma Services network. Eurofins utilizes preferred couriers which offer the best case scenario based on the country in question and service being performed [ambient, cooled or frozen shipments] to ensure specimen stability and the most cost-effective solution. By using a limited number of couriers, we achieve greater operational efficiency and maximize volume discounts for the benefit of our clients. This global logistics system is supported by a customized track-and-trace system, ensuring quality, monitoring the conditions of the samples, and allowing direct tracing of samples by our clients.

- Commercial DNA Testing
- Clinical Monitoring Programs
- Post Marketing Surveillance

Kit Packing and Distribution Services

Home Collection Kits

Home Collection kits are offered in a variety of configurations to collect mouth swab samples, urine samples and stool samples. We can also facilitate in-home blood sampling, pharmacodynamics and pharmacokinetic sampling, and pharmacogenomics sampling where needed. Eurofins provides the logistical support to deliver all collected specimens to their final destinations by arranging courier pick-up for time-sensitive specimens, or usage of regular postal services for specimens that are not time-critical.

True Global Coverage

Eurofins BioPharma Services uses three dedicated wholly-owned and purpose-build Kit Packing Facilities in Louisville, KY, USA, in Oosterhout, the Netherlands, Europe, and in our Shanghai, China Central Laboratory facility to support both China domestic clinical studies and the greater APAC region. Every year, about 1 Million specimen collection kits are shipped to investigator sites, health care professionals and patients' homes across 85 countries. All Kit Packing Facilities deploy lean, globally standardized processes and our operations have embedded flexibility to handle fluctuations in demand, allowing quick expansion of services.

Materials

Eurofins BioPharma Services works with a global network of manufacturers and distributors to leverage our global footprint in support of the distribution of harmonized, specialized, and custom material solutions. We deploy internal Materials Experts to accommodate customized sample collections materials to meet our Client's requirements for standard and specialized testing needs. We also support the customization of the exterior of Kit Packaging materials to include our Client and/or Protocol specific brand.
